

Yieh Yuheng (Donavan)

(+65) 8522 9843 | yiehyuheng@gmail.com | [LinkedIn](#) | [GitHub](#)

SKILLS

Programming:	Python, SQL, Data extraction, Data cleaning, Database querying, Web scraping, Google Cloud, Git, Version Control
Data Science:	Machine learning, Artificial Intelligence (AI), Text mining, Segmentation models, Graph machine learning, Natural Language Processing, LLMs, GenAI, Retrieval Augmented Generation, LLM Evaluation
Data Analytics:	Data visualization, Dashboarding, Tableau, Excel

WORK EXPERIENCE

DATA SCIENTIST

PwC | Feb 2025 – Feb 2026

- Designed and built an AI-driven ESG analysis solution with web scraping, dynamic routing, and semantic retrieval, enabling automated insights generation and improving practice profit margin by est. SGD \$400k annually
- Built multi-agent LLM workflows (LangGraph, CrewAI) for policy gap analysis and report automation for 3 different functional teams, saving 1,600+ hours of manual effort annually
- Developed RAG pipeline on internal knowledge base and scheduled web extractions, with evaluation and hallucination detection using OpenAI and Ragas
- Led adoption of AI and development best practices, implemented test cases, built out CI/CD pipeline with Azure Pipelines, and advocated for LLM output tracing
- Conducted multiple workshops for over 100 attendees on driving GenAI adoption and prompt engineering
- Regularly presented work to technical and non-technical stakeholders in town halls, AI leadership meetings, and clients

DATA SCIENTIST

Synthesis | Jun 2022 – Jan 2025

- Leading development of new geospatial data science methodology to extract features from map data, and create scoring algorithms to help clients rank and prioritize venues for product distribution
- Developed segmentation models and user personas for 4 international brands by building and analyzing social network maps, layering graph machine learning and NLP techniques with external data sources to identify user behavior patterns
- Wrote and deployed data extraction scripts utilizing multi-threading and IP proxy management to internal production tool, reducing project delivery time by up to 10% and cost of data extraction by 90%
- Built and iteratively improved live dynamic dashboards on Tableau using SQL, Python, and GCP BigQuery to visualize consumer social behavior trends for business stakeholders
- Drove innovation by running and presenting proof-of-concepts for GenAI use cases, and led early adoption of GPT and multimodal models for client facing projects

RESEARCH ASSISTANT

Software Analytics Research Group @ SMU | Jan 2022 – May 2022

- Collaborated with a team of research engineers to predict open-source code affected by vulnerabilities and bugs
- Wrote custom web scraping scripts with Python for >10 web domains to automatically parse additional information for >7,000 uniquely reported vulnerabilities
- Researched relevant literature and implemented extreme multi-label classifiers for classifying sparse label text datasets (~3,000 labels) to improve prediction results by 9% in F1-score
- Performed data processing and feature engineering, evaluated information extraction techniques (NER, PoS-tagging, text vectorization etc.) on model performance

EDUCATION

Name of School: Singapore Management University

Degree: BSc in Information Systems, Major in Business Analytics (Cum Laude)
